SUMMARY

Fullstack Engineer and engineering lead with 6 years of professional experience delivering cross-platform products, modernizing TypeScript systems, and building practical AI-assisted developer workflows. Proven track record leading teams of 8+ engineers, improving backend performance, and shipping production software across web, mobile, desktop, and backend environments.

WORK EXPERIENCE

Independent AI Engineer | Personal R&D and Product Work | Jan 2024 – Present

- Build and iterate on agentic developer workflows for code generation, repository analysis, and safe execution under practical engineering constraints.
- Open-source experiments around orchestrated AI agents, local-first tooling, and reusable workflow patterns for product and engineering teams.

Software Engineer / Team Leader Blameo (Outsourcing for Viettel Group) | Hanoi | Jun 2022 – Present

Engineering Leadership & Mentorship

- Hiring & Growth: Designed a practical interview loop for frontend and mobile roles to improve hiring quality and team fit.
- Team Development: Built a mentorship path for interns and junior engineers that improved code quality and delivery confidence.
- Leadership: Led and mentored a cross-functional team of 8 engineers while coordinating execution with project milestones.

Backend Architecture & System Performance

- System Refactoring: Refactored legacy Node.js services, reducing API latency by 50% and improving reliability during peak traffic.
- Full-stack Development: Architected KPI tracking and Viettel Cloud features with React, TypeScript, and Node.js.
- Technical Standards: Standardized project setup, linting, and Git workflows to keep delivery more predictable across the team.

Software Engineer CMC Global | Hanoi | Oct 2021 – Jun 2022

- Cross-Platform Development: Engineered a unified video conferencing experience across web (Vue.js), desktop (Electron), and mobile (React Native).
- Real-Time Communication (RTC): Implemented media synchronization improvements to stabilize video quality across devices and network conditions.
- Code Quality: Contributed to code reviews and architecture discussions to reduce regressions and improve maintainability.

Frontend Developer NTQ Solution | Hanoi | Oct 2020 – Oct 2021

- Low-Code Platform Development: Built core React Native features for a low-code mobile generation platform with reusable runtime patterns.
- E-Learning Application: Delivered exam and e-learning flows with a focus on usability, smooth interaction, and release stability.

PROJECTS

Agentic SDLC (Personal R&D) | AI Engineer | (Jan 2024 – Present)

- Challenge: Reduce manual engineering effort across repetitive coding tasks, documentation, and project setup.
- Action: Designed multi-agent workflows for requirement analysis, code generation, and automated verification using LLM tooling and graph-backed context.

- Result: Produced reusable internal workflows and open-source experiments that improved iteration speed and made AI execution more repeatable.
- Tech Stack: Antigravity, Gemini, Neo4j, LEANN.

• Core Stack: Python, LangChain, LLMs, Docker, GitHub Actions.

NetBI – KPI Management Platform | *Software Engineer (Jan 2023 – Jan 2024)*

- **Challenge:** Build a unified web and mobile platform for enterprise KPI monitoring with complex data visualization needs.
- Action: Led frontend delivery across React and React Native, built regional KPI map visualizations, and set up CI/CD with GitLab CI, Jenkins, and Nginx-based deployment.
- Result: Enabled real-time regional KPI tracking on mobile and reduced manual release work for both iOS and Android delivery.
- **Tech Stack:** React, React Native, ChartJS, GitLab CI/CD, Jenkins, Linux VPS, Nginx.

Naver Cloud Meeting | *Software Engineer (Jun 2021 – Dec 2022)*

- **Challenge:** Develop a stable, multi-platform video conferencing solution with consistent user experience.
- Action: Built real-time collaboration features across web, desktop, and mobile, including media adaptation work and desktop notification support.
- Result: Delivered a stable conferencing experience with better cross-platform consistency and stronger user engagement on desktop.
- **Tech Stack:** Vue.js, React Native, Electron.js, Jitsi Meet.

GoPass – Online Exam Platform | *Mobile Developer (Oct 2020 – Jun 2021)*

- **Challenge:** Create a stable, user-friendly exam application for the Japanese market with offline functionality.
- Action: Built the React Native app and implemented an offline-first data flow with Realm DB for local caching and sync.
- Result: Shipped a stable exam experience that continued to work reliably even with intermittent connectivity.
- **Tech Stack:** React Native, Realm DB, PHP.

TITLES AND AWARDS

May 2023

Employee of the Year – Blameo Company

SKILLS

- Engineering Leadership: System Architecture, Team Mentoring, Technical Interviewing, Agile/Scrum, CI/CD Design.
- AI & Automation: Agentic Workflows, LLM Integration, Multi-agent Systems, Prompt Engineering, AI-Assisted Development.
- Fullstack Development: TypeScript, Next.js, Node.js (NestJS/Express), React Native, Electron.js, Vue.js.
- Infrastructure & DevOps: Docker, Jenkins, GitLab CI/CD, Nginx, AWS, Linux/Ubuntu.
